

Back Support Product Line

IMPACTO™

AIR BELT™

Inflatable multi-celled chambers conform to your back when air is added providing support and reducing muscular discomfort. The AIR BELT can be worn inside or outside of clothing. Aspirator can be tucked under belt.

***AIR PLUS**
Lightweight AIR BELT with moisture absorbing inner lining and nylon outer covering. Extended web with hook and loop closure fits two convenient sizes S/M and L/XL.
Available in sizes S-XXXL with Coolmax® inner lining, **TECH**

SPORTS PLUS FR
Fire retardant AIR BELT made of 100% cotton Proban® shell for those who work in thermal risk situations. Soft foam liner for extra comfort and retention of body heat which is ideal for muscle relaxation. Hook and loop closure.
Also available with breathable cotton outer shell, **SPORTS PLUS**

TOUR BELT
Moisture wicking Coolmax® inner lining with Ripstop nylon outer cover provides excellent durability. This AIRBELT allows freedom to flex, twist and turn without discomfort. Perfect for activities such as golfing, driving or all day wear.

DUAL ADVANTAGE
Heavy duty AIR BELT with Coolmax® inner lining and Cambrelle® outer cover with the advantage of sturdy adjustable leather straps. This reinforces the conformation of the bladder to the back providing additional support to the abdominal muscles. Hook and loop closure with metal roller buckle.

LUMBOSACRAL AIR BELT
Inflatable contoured air chambers with detachable air pump. Neoprene stretch fabric in front/side panels. Moisture absorbing inner lining and durable nylon outer covering. Three adjustable straps for additional support over the lumbosacral area.

***AIR TEMP ADVANTAGE**
Built in pockets for air support chambers, cold compression or moist heat (optional). Two air support chambers with self-contained aspirator. Flexible neoprene inner lining. Plastic support stays with non-slip strips. Adjustable elastic straps provide additional support.
Available without air support chambers or pockets, **BC2000**

***BACK COACH**
Mesh panels provide ventilation. Plastic support stays with non-slip strips to keep belt in place. Adjustable elastic side straps when extra support is needed. Hook and loop closure.

TS213 THERMO WRAP
Back support with Trioxon® lining captures body heat and wicks moisture. Contoured shape and firm fit provides compression and support. To be worn directly against skin. Hook and loop closure.
Also available with elastic side straps and support stays, **TS227**

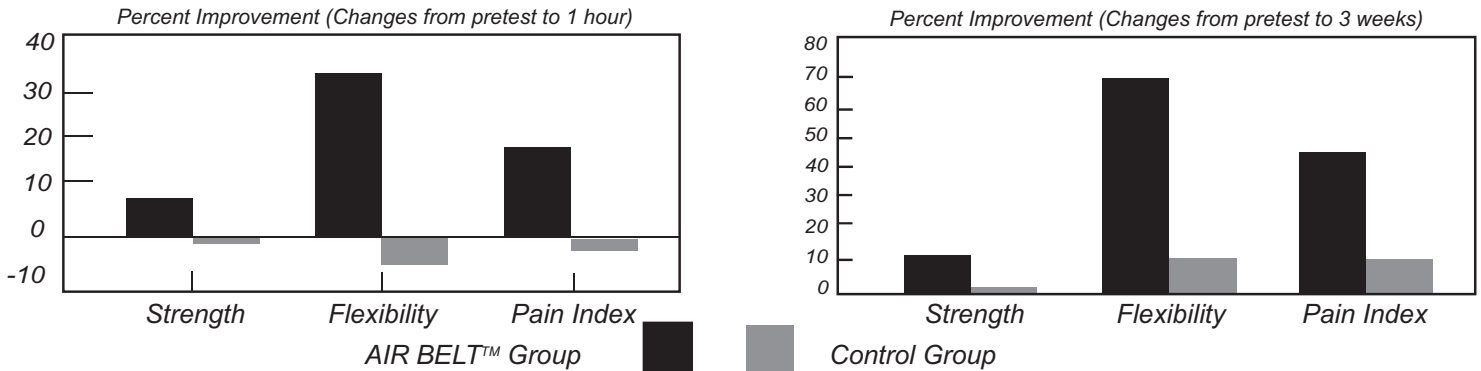

Sizing Information on Back

***Optional elastic suspender straps available, Suspenders**

"Ergonomic Air Support" Technology

Impacto's patented multi-cell pneumatic technology employs air as the primary element to not only effectively support but to cushion and stabilize as well. Unique product designs provide optimum anatomical conformance with firm supportive pressure to specific muscles. There is no restriction of blood flow or inhibition of natural range of motion. In addition, the air cells actually create a pulsing, graduated compression which massages the muscles, keeping them properly elongated and in a resting state. In this condition muscles are less prone to initial or continuous injury.

SELECTED STUDIES SUMMARY Percent Improvement (Changes from pretest to 3 weeks)

SUMMARY: The results of this study indicate that use of an Air Belt may lessen pain associated with low-back injury and help increase expression of previous strength and flexibility, thus facilitating a return to normal daily activity.

AIR BELT™ - ELECTROMYOGRAPH RECORDINGS

Graph #1 - Subject standing. Recording muscular activity in patient with painful muscle spasm.

Graph #2 - Subject standing. Air Belt inflated for 5 minutes significantly reduced muscular activity correlating with relief of pain.

Summary: This study was conducted on a "high-risk" group of 30 individuals. To qualify as a subject in this study the person had to have been defined as having back problems for more than one year. Sixteen out of 30 subjects (53%) were absent from their workplace 1 to 14 or more days during the 3 months prior to the use of the Air Belt. The Air Belt was introduced and used for the next 3 months. During this time none of the individuals experienced lost time due to back pain or injury.
